

Lecture Note Template Preview

SteelHacks note-template POC

1 C syntax parsing

- C is parsed _____
- Variables and functions must be declared _____
- How is this different from Java? _____

argv is a pointer

2 Getting input

2.1 Command-line arguments

- `argv[0]` is always _____
- Example program: _____

2.2 Code: read argv

```
int main(int argc, char *argv[]) {  
    // What does argv[1] contain?  
    // -----  
}
```

3 Streams

- stdin / stdout / stderr are _____
- Why must a stream be flushed? _____

Diagram: buffered stream from program to OS

Sketch the buffer, the flush, and where printf writes.

This template may not cover every topic from the source slides.
